Product Description

This lovely classroom resource encourages concentration and is
wonderful for improving pre-writing techniques.
5 sharp colors tandem wooden boards (325 x 550mm) with a pair of symetric milled patterns on each board.
The mirrored milled figures with shift buttons can train left and right half brain.
Best for childern (age 4 - 7).
Tandem Boards encourage the user to make parallel hand movements and therefore help develop the fine motor skills necessary for writing and painting, as well as laterality and hand-eye coordination. This also trains concentration and good observing skills but above all the complex patterns make the hands move faster and more evenly to the target if the "path" is grasped beforehand.
