Product Description

XT/Lime Green - Medium Firm - This is the middle level, which we call XT ("Xtra Tough"). It's firmer, but still fairly chewy, recommended for moderate chewers. ARK's Dino-Bite® Chewable Jewelry Necklace is the coolest new chewelry on the block! This "roarsome" T-Rex design is sure to be a hit with dinosaur fans of any age. This is a pretty 'beefy' chew pendant with a lot of 'meat' on its bones. It's a great option for those who prefer chewing with their pre-molars and/or front teeth. Use this oral sensory solution as a safe alternative to chewing on pencils, shirts,

fingers, etc. and to help calm, focus, and self-regulate. Like all other ARK chewelry, it's made in South Carolina.

*Please note: because of its beefier shape, each level of the Dino-Bite® may feel tougher than the same toughness level in one of our more slender shapes. So for example, if you like the Krypto-Bite® in the middle XT level, you may want to order the soft Dino-Bite®.

Caution: This product is not a toy. The clasp and cord are not intended for chewing. Contains small parts that may pose a choking hazard - direct supervision required. Recommended for ages 5 years and up. Although these chew tools are sturdy and durable, no chew tool is indestructible. Wear/tear may be expected given the nature of the intended use. How long they last is typically equal to the amount and intensity of the chewing, as well as other variables (such as jaw strength, stress/anxiety levels, if other sensory strategies are in place, etc.). While for some people a chew tool will last forever, for others with heavy/aggressive oral needs, they may go through it very quickly. Please supervise at all times, regularly inspect the chew, and replace if necessary if the item shows signs of wear and tear.
