Product Description

ARK's Textured Spoon Tip attachments turn any Z-Vibe® into the ultimate sensory feeding tool. They're similar to the standard Spoon Tips, but with gentle bumps on the back of the spoon. This texture helps transition children from puréed to textured foods and provides added tongue stability. The size and shape of the spoon bowl allow for easy feeding and oral stimulation - big enough to hold an appropriate amount of food, but small enough to prevent the spoon from being overloaded with too much food. When used with the Z-Vibe handle, the Spoon Tips

can help "wake up" the mouth, increase awareness, and provide stimulation to the lips, tongue, cheeks, and jaw. A wonderful tool for any sensory mealtime treatment plan, these Spoon Tips have helped many therapists and parents get tube-fed children on their first solid foods.

- Made in the USA out of medical grade, FDA compliant materials
 - No lead, phthalates, PVC, BPA, or latex
 - Measures approximately 3 x .75 x .25"
 - Dishwasher-safe
 - To be used with either the Z-Vibe or Z-Grabber handle (sold separately)
 - The Spoon Tip comes in two different versions - hard or soft. The soft version (blue) is recommended for individuals with a strong bite reflex.
 - These spoons are sized for children up to the age of roughly 2.5 years, depending on their mouth size.
 - Also available in non-textured versions [here](#).
- **Caution:** this therapeutic tool should be used under adult supervision at all times.
