Product Description

The Digi-Extend® is a unique therapy device that can isolate the extension of all five fingers and each of the individual finger joints. The product strengthens the intrinsic and extrinsic muscle groups to maximize extensor tendon gliding, joint motion, coordination and muscle function in the hand and forearm.

The Digi-Extend® focuses on the extensor mechanism of one or all fingers as it targets the area of the hand that needs rehabilitation. Patients can easily change the resistance levels and vary their hand positions for specific exercises to help

maximize the exercise goals and prevent injury. The Digi-Extend® can also be used for finger adduction, abduction, blocking and flexion exercises. It is compact in design, high-tech, easy and comfortable to use as well as effective in helping patients reach their therapy goals. Four color coded band resistance levels allow each muscle or joint to work at a comfortable level and build as increased strength is achieved.
