Product Description

We offer a series of training equipment with a solid metal structure with a plastic and soft foam finish, dedicated especially to children. High-quality workmanship and colorful design will make children eager to engage in physical activity. Exercises on a treadmill, stepper and bicycle strengthen the leg muscles

and develop the coordination of movements necessary to maintain an upright body position. Learning to walk on a treadmill accelerates the development of walking skills in children with Down syndrome. The solid metal construction and plastic and soft foam finishes make training safe. The built-in display shows the time, distance covered and amount of energy used. It can be used in a kindergarten classroom or outdoors, but requires a flat surface. Children may only use the equipment under the supervision of an adult.
