Product Description

Our comforters are handmade and are made from 100% cotton and fleece certified to the Oeko-Tex Standard 100. The interior of the comforter consists of square panels filled with glass microbeads, which ensures even weight distribution along its entire length. It is the only one on the market additionally filled with down, which is why it is so fluffy and soft. The cover is removable (you don't need to wash the duvet's inner filling), making it easy to keep the duvet clean. The cover is attached

to the duvet's inner filling via zippers, not buttons or ties like other manufacturers use, which ensures the filling stays evenly distributed throughout the duvet. The cover is made of soft fleece; one side is smooth and the other is covered with sensory nubs. Both sides are pleasant to the skin and gentle on the entire body. The weight of the weighted blanket should be determined in consultation with a Sensory Integration therapist; we recommend that the weight be 10% of the user's body weight.

Dimensions:

Size S: 90 x 100 cm, 3 kg.

The product has passed testing at the Textile Research Institute. It holds certificates for compliance with the following standards:

PN-EN ISO 12952-1: 2011

PN-EN ISO 12952-2: 2011

We recommend washing the duvet cover at a temperature not exceeding 40°C. Wash the duvet insert at a maximum temperature of 30°C; do not spin dry. After washing, hang to dry. Do not use automatic clothes dryers.

This product complies with EU standards.
