Product Description

The highly-functional Sensory Friendly Bite Blocks promote symmetrical jaw strength, stability, and grading for clients with weak jaw musculature evidenced during speech sound production or feeding (i.e. reduced mobility, sliding, or jutting). As many OPT (Oral Placement Therapy) tools, it is used both to diagnose and treat. Excellent for use with Dysarthria, Apraxia and Dyspraxia.

Some clients may prefer biting into a softer surface as they work their way through the Bite Block hierarchy. The Sensory Friendly Bite Blocks work in exactly the same

manner as the original version, but are constructed of a softer, more pliable material.

- A TalkTools original that promotes jaw strength, stability, and grading
- Includes two sets of six Bite Blocks and TalkTools original instruction booklet
- Reusable, durable and easy to clean
- Soft, textured surface
- Also available, the original Jaw Grading (red) set
