Product Description

Therapeutic swing is a modern tool created for Sensory Integration therapy, which combines functionality, comfort and aesthetics. It will be great for use in therapy offices, as well as in kindergartens, schools or at home.

Note: The product does not include snap hooks, mounting hooks or hanging kit.

Supporting therapy and child development

Swing supports the development of:

- balance and motor coordination, - tactile perception and proprioception, -

postural tension and motor planning.

It stimulates the vestibular system, and through movement and pressure helps improve concentration, sensory integration and muscle strength. It is not only therapeutic equipment, but also a form of safe and attractive play.

Comfort and safety

The seat of the swing measures 76x76 cm and is entirely covered with soft sponge, which makes it comfortable and pleasant to use.

- Load capacity: 90 kg

For maximum safety:

- all edges are protected with dense, shock-absorbing foam, - the edges are made of durable, soft upholstery material, which better protects against cracks and cuts resulting from impacts.

All elements are carefully sanded in two stages. Then each element is varnished with certified varnish (among other things, the varnish meets the very important toy safety standard ÖNORM EN 71-3, it is free of heavy metals). Thanks to this, the base of the swing, its underside is resistant to dirt, has a higher resistance to scratches, abrasion and even the effects of saliva or sweat because it meets DIN 53160-1 and DIN 53160-2 standards. Most manufacturers, reducing their costs, do not varnish the components of their products, which reduces the safety and quality of the product.

Artificial leather used in the production of our products is authorized to use the mark STANDARD 100 by OEKO-TEX®. It complies with the EU regulations on the use of azo dyes and the EN 71-3 standard. It meets all the requirements. It meets the humanoecological requirements of the current standard for children's products. It has high durability and flame retardancy. It has been certified by the National Institute of Hygiene.

The product complies with EU standards.
