Product Description

Excellent for increasing or decreasing oral sensitivity prior to feeding, oral exercise, or speech sound production work.

These sponge spatulas were originally used only for oral hygiene of bedridden patients and then became a discovery of American speech therapists who began to use them in speech therapy.

Application:

Hypersensitivity treatment

Sensory therapy

Dysphagia treatment

TOOTHETTE spatulas can be freely shaped, moistened and used to feed patients with food of different density and texture.

Their value was appreciated by ARK Therapeutic Services Inc. specialists who designed the special base to the Z-Vibe vibrator in which TOOTHETTES can be installed.

The spatulas can be used with speech therapy vibrators: Z-vibe (DnZ-Vibe & T-vibe).
