### Product Description

This speech therapy program, developed by TalkTools Instructor and apraxia expert, Renee Roy Hill, MS, CCC-SLP, is ideal for transitioning clients with motor-planning deficits from Oral Placement activities to speech production. The three sets of tools provide tactile cueing for specific sounds -- /m/, /p/, /b/, /oo/, /oh/, /ee/, /ih/, /eh/, /uh/ and /ah/, so clients can feel where the articulators should be during speech production. When combined with verbal and visual cues, they provide a multisensory approach to facilitating speech.

Program includes 1 set each:

bilabial shapes

tactile tubes

speech blocks

instruction manual and demo videos (access to manual and videos available AFTER purchase)

Click through to purchase apraxia tools separately
