Product Description

Do you get discouraged because your child or client won't work with you for more than a minute or two? Does your child or client not understand the concept of time? Is your child a visual learner? Then why not "show" the time with this visual clock? The Time Timer allows your clients to watch time pass and know exactly when the activity or session is over! Set the timer for the appropriate number of minutes, and when the red display disappears, the therapy segment is finished.
