Product Description

This product is used to deliver a constant, weight-modulated dose of deep sensory input to reduce tactile defensiveness in cases of sensory modulation disorders and to help shape certain postural responses.

Each vest comes with a standard weight.

The vest's weight is not permanently sewn in (it consists of separately sewn pouches), allowing you to adjust the weight—reducing or increasing it over time as recommended.

The vest is filled with special, safe glass granules. Its texture is similar to sand, making the vest soft and gentle.

The vests are made of cotton fabric.

Weight of the Small therapeutic vest: maximum weight 2 kg - 8 pouches.

This product complies with EU standards.

COLORS IN STOCK MAY VARY.
